

7 unusual items in different countries

It's too obvious to study mathematics, physics or language in school. One can only imagine if the Ukrainian schools the pupils studied unusual items. For example, snowboarding or skiing instead of gym class and summer – on a skateboard. And instead of a lesson in "Science" just to go for a walk outside, enjoy nature, would do well, right? Perhaps it's time to dilute the curriculum for our pupils, as it did in other countries? We offer You to familiarize yourself with a selection of unusual items, which children learn in school.

Germany – lessons of happiness

It would seem that happiness is everyone [this page](#) understands in own way. Here the psychologist Abraham Maslow believes that to be happy you need five levels of needs:

1. physiological needs (hunger, thirst, sleep)
2. security needs;
3. the needs of communication and love;
4. the need to respect;
5. the need for self-realization.

In Germany believe that "Happiness" should be taught in school. By the way, describes this discipline only in the city of Heidelberg. In order to get a high score, students must demonstrate happiness with the help of video or charity. Hope the kids are doing it not with "coercion", and they really feel happy.

Japan – the love of nature

Why study the types of plants and trees from the textbook, if you can do this visually? Students in Japan enjoy nature, enjoy all the gifts that she gives. It should be noted that this method helps to open up a new world and different way to look at things. Interestingly, the Japanese use 24 words to describe the seasons, and to describe the phenomenon of rain – there are 120 phrases.

Australia – surf

If You want to learn how to conquer the waves, you can do so in Australia. Children try surfing even from a young age. That's why they become professional athletes before high school graduates. Of course, the river is unlikely to go. But powerful ocean waves can be waves of the Black sea.

Israel – cyber security

Create new accounts in different social networks – this just. And how to protect your personal data so that they are not abused by other organizations, what to do when the computer virus has penetrated? The lesson of "the theory and practice of cyber war", high school students learn to fight with computer viruses and how to behave in social networks and blogs. Yes, Yes, etiquette also exists. To the creation of this discipline joined the Israeli intelligence service and the Department of the armed forces in cyberwar.

Bashkiria – beekeeping

Do not be afraid of bees, they also provide a valuable nectar. At schools of Bashkiria students gather honey and care for the hives.

Kalmykia – chess lessons

The goal of this lesson is to develop logical thinking in children. The lessons are so that no one lost.

USA – scientific discoveries

In addition to the theory, American students start the practical part. During the year, they need to create their own invention. Their development need to be protected, preparing a presentation.
